

Project Demonstration

Phase 7

Date	
Team ID	
Project Name	ServiceNow-Based Employee Laptop Request Application
Maximum Marks	

Overview

This document contains the link to the recorded demonstration video for the ServiceNow-Based Employee Laptop Request Application. The video walks through everything built inside the ServiceNow instance — the custom table, the Record Producer, the approval Flow, the Business Rule, security configuration, and real examples of approved and rejected requests — explaining what each part is and why it was created.

Demo Video Link

What the Video Covers

- Introduction to the project and the problem it solves
- The Update Set used to package all customizations
- The custom Laptop Request Form table and its fields
- The Relationship connecting requests to the Approval table
- The Record Producer and Service Catalog item employees use to submit a request
- The Flow Designer approval workflow, step by step
- The Business Rule that blocks duplicate requests
- Roles, Groups, and Access Control Lists (ACLs) for security
- A real approved request and a real rejected request, with their email notifications

Notes

The video is hosted on YouTube and linked above. It is also referenced in the project's GitHub repository README, alongside the complete set of project documentation covering the Ideation, Requirement Analysis, Project Design, Project Planning, Development & Testing, and Documentation phases.
