

Ideation Phase

Define the Problem Statements

Date	
Team ID	
Project Name	ServiceNow-Based Employee Laptop Request Application
Maximum Marks	2 Marks

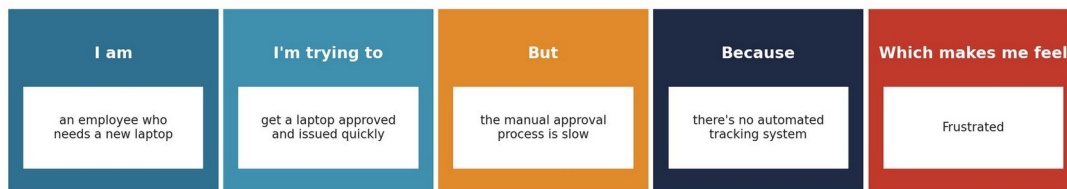

Customer Problem Statement Template:

Create a problem statement to understand your customer's point of view. The Customer Problem Statement template helps you focus on what matters to create experiences people will love.

A well-articulated customer problem statement allows you and your team to find the ideal solution for the challenges your customers face. Throughout the process, you'll also be able to empathize with your customers, which helps you better understand how they perceive your product or service.

Example: Employee Laptop Request Application — PS-1 (Employee)

Example: Employee Laptop Request Application — PS-2 (Manager)

Problem Statements:

The table below consolidates all three problem statements identified for this project — covering the employee, the manager, and the IT admin who fulfils the request.

PS	I am (Customer)	I'm trying to	But	Because	Which makes me feel
PS-1	an employee who needs a working laptop for daily tasks	raise a laptop request and get it approved and issued quickly	the manual approval process is slow and hard to track	there is no automated system to route and monitor approvals	frustrated and stressed, as it delays my project work
PS-2	a manager who needs to review and approve laptop requests for my team	approve or reject requests efficiently and stay on top of pending items	I don't have a single, filtered view of only my own approvals	the approval list is not filtered per approver by default	overwhelmed, since I have to search through unrelated records

PS	I am (Customer)	I'm trying to	But	Because	Which makes me feel
PS-3	an IT admin who fulfils approved laptop requests	issue the correct laptop model and close the request promptly	I don't always know when a request has been fully approved	there is no automatic notification once approval is complete	uncertain, since I must check manually before acting

Key Insights & Summary

Across all three personas, the common thread is the absence of an automated, trackable workflow. The employee lacks visibility into request status, the manager lacks a filtered approval view, and the IT admin lacks a clear trigger once approval is complete. These gaps directly informed the design of the ServiceNow Record Producer, Approval Flow, and notification-driven Business Rule built in the later phases of this project.
