Empathy Map Canvas:

An empathy map is a simple, easy-to-digest visual that captures knowledge about a user's behaviours and attitudes.

It is a useful tool to help teams better understand their users. Creating an effective solution requires understanding the true problem and the person who is experiencing it. The exercise of creating the map helps participants consider things from the user's perspective along with his or her goals and challenges.

Why We Used This Exercise

For the Employee Laptop Request Application, two distinct users interact with the system: the employee who raises a laptop request, and the manager who approves it. Building an empathy map for each persona helped the team understand both sides of the workflow before designing the ServiceNow solution (Record Producer, Approval Flow, and Business Rules).

Persona 1: Employee (Requestor) — Employee Laptop Request Application

Persona: An employee who needs to raise a laptop request and get it approved and issued through the ServiceNow Service Portal.

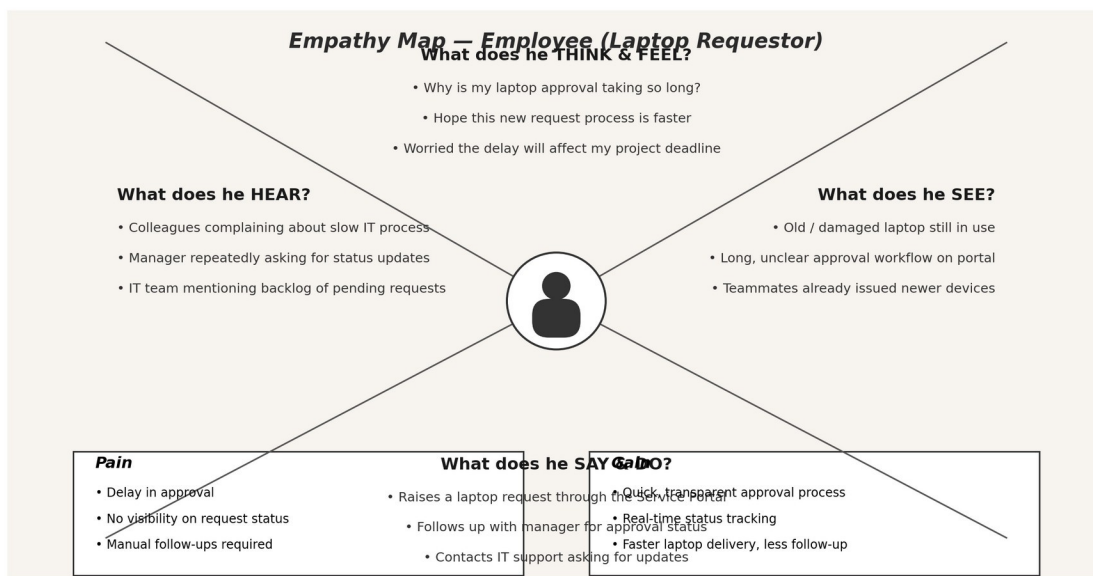

Figure 1.1 — Empathy Map: Employee (Laptop Requestor)

Persona 2: Manager (Approver) — Employee Laptop Request Application

Persona: A manager who needs to review, filter, and approve or reject laptop requests raised by employees on their team, without wading through unrelated records.

Key Insights Derived from the Empathy Maps

- Employees value speed and visibility — they want to know where their request stands without following up manually.
- Managers value a filtered, personal view of approvals rather than the full raw approval table.
- Both personas are impacted by the lack of automation and access-control gaps in the manual process.
- These insights directly shaped the Customer Problem Statements (PS-1 and PS-2) in the next phase.
