

Project Design Phase-II

Problem - Solution Fit Canvas

Date	
Team ID	
Project Name	ServiceNow-Based Employee Laptop Request Application
Maximum Marks	4 Marks

1 CUSTOMER SEGMENT(S)

- Employees at the company who need a laptop:
- New hires during onboarding
- Employees whose laptop is lost, damaged, or stolen
- Employees changing roles who need different specs

2 JOBS-TO-BE-DONE / PROBLEMS

- Employee: get a working laptop quickly without back-and-forth emails
- Manager: review and approve equipment requests with visibility
- IT: track, fulfill, and audit hardware requests in one place

3 TRIGGERS

- Starting a new job (onboarding)
- Laptop breaks, is lost, or stolen
- Scheduled hardware refresh/upgrade cycle
- Role change requiring different specifications

4 EMOTIONS: BEFORE / AFTER

- Before: frustrated, blocked, unproductive, unsure of the process
- After: relieved, equipped, confident, and able to get back to work

Purpose / Vision: Make requesting and receiving company equipment as simple as ordering from an online store.

5 AVAILABLE SOLUTIONS

- Emailing IT directly - slow, no tracking
- Walking to the IT helpdesk - time-consuming
- Ad hoc spreadsheet tracked by an admin - error-prone, no audit trail
- Verbal request to manager - easily lost or forgotten

6 CUSTOMER CONSTRAINTS

- Requires manager sign-off before fulfillment
- Limited laptop stock / inventory on hand
- Company asset & budget policy caps model choice
- Employee may not know the request process exists

7 BEHAVIOUR

- Directly related: search the intranet/Employee Center for 'laptop request', fill out a form, follow up with manager or IT.
- Indirectly associated: ask colleagues how they got their laptop; message IT informally on Teams/Slack.

8.1 CHANNELS - ONLINE

- ServiceNow Employee Center portal
- Email notifications & confirmations
- Teams/Slack messages to IT for informal follow-up

8.2 CHANNELS - OFFLINE

- Verbal request to manager during 1:1s
- In-person visit to the IT helpdesk

9 PROBLEM ROOT CAUSE

- As the company grew, laptop requests were still handled manually through email and spreadsheets. This led to duplicate requests, no approval trail, and no visibility into fulfillment status.

10 YOUR SOLUTION

- A ServiceNow-based Employee Laptop Request Application: a self-service catalog form, automatic duplicate-request check, manager approval flow, email/SMS notifications, and asset fulfillment tracking - giving employees a fast self-service path and IT/managers a structured, auditable workflow.
