

Project Design Phase Proposed Solution Template

Date	
Team ID	
Project Name	ServiceNow-Based Employee Laptop Request Application
Maximum Marks	2 Marks

Proposed Solution Template:

Project team shall fill the following information in the proposed solution template.

S.No.	Parameter	Description
1.	Problem Statement (Problem to be solved)	Employees currently request laptops through unstructured email, spreadsheets, or verbal requests to managers or IT. This leads to duplicate requests, delayed and inconsistent approvals, and no visibility into fulfillment status for employees, managers, or IT.
2.	Idea / Solution description	A ServiceNow-based Employee Laptop Request Application offering a self-service catalog form, an automated business rule that blocks duplicate open requests, a configurable manager approval flow, real-time email/SMS notifications, and end-to-end asset fulfillment tracking.
3.	Novelty / Uniqueness	A built-in duplicate-request check prevents redundant approvals before they ever reach a manager. The entire lifecycle - request, approval, notification, and asset assignment - is tracked on one auditable platform, and the approval workflow can be reconfigured through Flow Designer without writing custom code.
4.	Social Impact / Customer Satisfaction	Reduces employee downtime waiting for equipment, gives employees real-time visibility into where their request stands, lowers the administrative burden on managers and IT, and creates a clean audit trail that supports compliance and asset accountability.
5.	Business Model (Revenue Model)	As an internal enterprise IT tool, value is realized through cost savings: reduced manual processing time, fewer duplicate asset purchases, and faster employee onboarding. The application can also be packaged as a reusable ServiceNow Store app and licensed per-seat or per-instance to other organizations.
6.	Scalability of the Solution	Built on ServiceNow's multi-instance PaaS, the application scales horizontally across departments and business units with no infrastructure changes. The same catalog-and-approval pattern can be extended beyond laptops to other IT assets such as monitors, phones, and software licenses.
