

Project Design Phase Solution Architecture

Date	
Team ID	
Project Name	ServiceNow-Based Employee Laptop Request Application
Maximum Marks	4 Marks

Solution Architecture:

Solution architecture is a complex process - with many sub-processes - that bridges the gap between business problems and technology solutions. Its goals are to:

- Find the best tech solution to solve existing business problems.
- Describe the structure, characteristics, behavior, and other aspects of the software to project stakeholders.
- Define features, development phases, and solution requirements.
- Provide specifications according to which the solution is defined, managed, and delivered.

Employee Laptop Request Application - Solution Architecture Diagram:

The diagram below shows how a laptop request moves from the employee, through ServiceNow's business rule and flow engine, to manager approval and IT fulfillment.

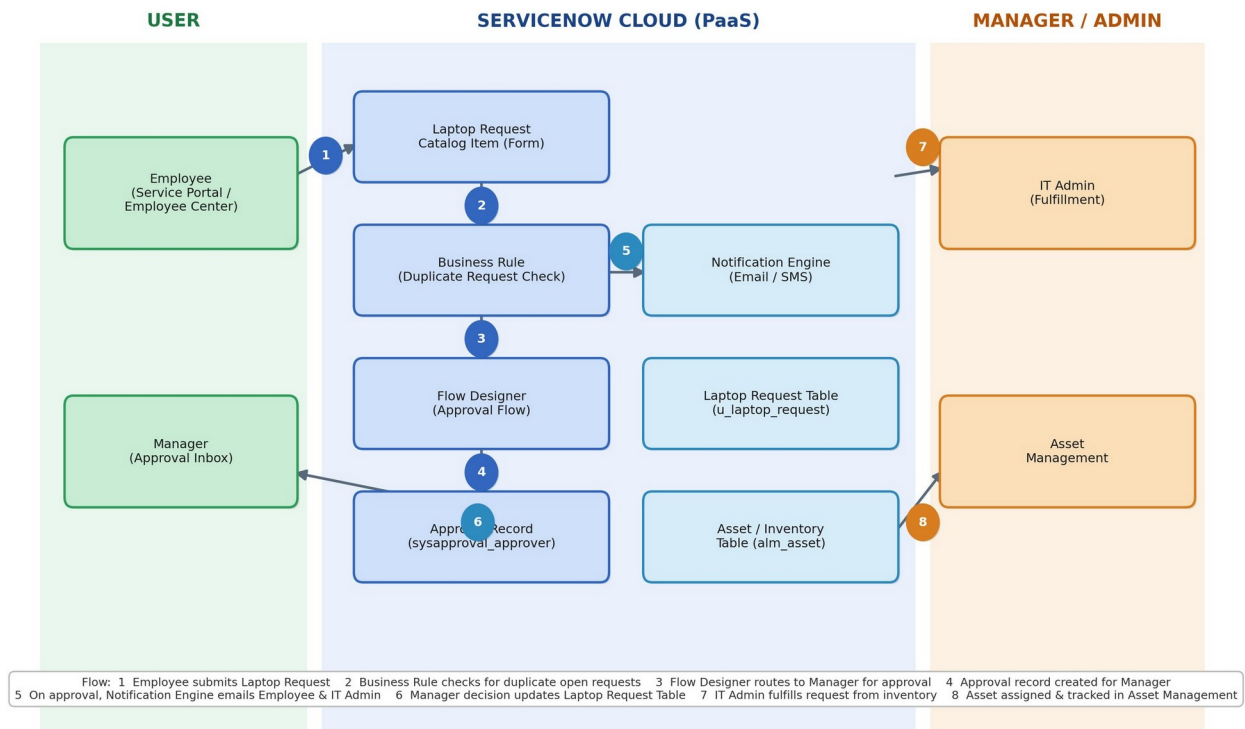

Figure 1 — Architecture and data flow of the Employee Laptop Request Application
