Test Scenarios & Results

Test ID	Scenario	Test Steps	Expected Result	Actual Result	Pass/Fail
FT-01	Laptop Request field validation	Enter valid and invalid values in Employee Email, Request Date, and Manager fields	Valid data accepted; mandatory Requester/Manager fields enforced	Mandatory fields enforced by table configuration as expected	Pass
FT-02	Type of Request & Reason choice validation	Select each value in Type of Request (Basic/Advance) and Reason (Software Development/Personal Use/Other)	All valid choices selectable; form saves correctly	Confirmed working for all choice combinations tested	Pass
FT-03	Record Producer submission	Employee fills and submits the "Laptop Request" catalog item from the Service Portal	New Laptop Request Form record created with Status = Pending Approval	Record LREQ0001004 created correctly with Status = Pending Approval	Pass
FT-04	Approval routing accuracy	Submit a request with a specific Manager selected	Approval task is assigned to that exact Manager	Approval correctly assigned to Abel Tuter as selected on the form	Pass
FT-05	Status transition on approval/rejection	Manager sets the approval State to Approved or Rejected	Laptop Request Status field updates accordingly	Status updated to Approved immediately after the manager's action	Pass
FT-06	Duplicate request prevention	Same employee submits a second request within the same calendar year	Business Rule blocks the insert with an error message	Not executed in this cycle — recommended as follow-up	Pending
FT-07	Role-based access control	Log in as it_manager vs. it_employee and attempt to create/edit/read a request	Manager is read-only; Employee has full CRUD on their own records	ACL configuration verified; live enforcement test recommended as follow-up	Pending
PT-01	Approval flow trigger time	Measure the time between record submission and Approval record creation	Approval record should appear within a few seconds	Approval record appeared near-instantly (not formally timed)	Pending
PT-02	Email notification delivery time	Measure time between the manager's approval action and the email log entry	Email should appear in the log promptly after the action	Confirmed appearing in System Logs → Emails immediately after approval	Pass
PT-03	Update Set load and preview	Open the Update Set containing 50+ customizations and preview it	No errors; all components listed correctly	52 customer updates loaded and displayed without errors	Pass

FT = Functional Test, PT = Performance Test.

PT-01 was observed informally as near-instant during manual testing but was not measured with a timer; a formal timed re-run is recommended before final sign-off.
