Project Overview

Project Name: ServiceNow-Based Employee Laptop Request Application

Project Description: A ServiceNow Service Catalog application that lets employees submit laptop requests (Basic or Advance), automatically routes them to their manager for approval through Flow Designer, updates request status, sends email notifications at each stage, and blocks duplicate requests from the same employee within a calendar year through a Business Rule.

Project Version: 1.0

Testing Period: 29 July 2026 to 31 July 2026

Testing Scope

- Employee submission of a laptop request via the Service Portal Record Producer
- Manager approval / rejection workflow (Flow Designer)
- Status transitions: Pending Approval → Approved / Rejected
- Email notifications to the manager (approval request) and requester (approved/rejected)
- Duplicate-request prevention Business Rule (one request per employee per year)
- Role-based access control — it_manager (read-only) and it_employee (create/read/write on own records)
- Update Set completeness for deployment to another instance

Testing Environment

Instance URL: <https://dev420356.service-now.com>

Credentials: Test users accessed via Impersonation — Employees: Andrew Jackson, Alissa Mountjoy; Manager: Abel Tuter

Test Cases

TC ID	Scenario	Test Steps	Expected Result	Actual Result	Pass/Fail
TC-001	Employee submits a laptop request	Impersonate employee → open “Laptop Request” catalog item → fill form (Email, Date, Manager, Type, Reason) → Submit	New Laptop Request record created with Status = Pending Approval	Record LREQ0001004 created with Status = Pending Approval	Pass
TC-002	Approval task assigned to correct manager	After submission, check the Approval list for the request	Approval record created with State = Requested, Approver = selected Manager	Approval record found — Approver = Abel Tuter, State = Requested	Pass
TC-003	Manager approves the request	Impersonate the assigned manager → open approval record → set State = Approved → Save	Laptop Request Status updates to Approved	Status field updated to Approved after saving	Pass
TC-004	Approval email sent to requester	After approval, check System Logs → Emails	Email with subject “Laptop Request Approved” sent to the requester	Matching email found in the Email log	Pass
TC-005	Duplicate request blocked	Same employee submits a second request within the same calendar year	Business Rule blocks the insert and shows an error message	Not executed in this test cycle — recommended as a follow-up test	Pending
TC-006	Manager has read-only	Impersonate a manager → attempt to edit an	Manager can view but cannot	ACL configuration verified (read-	Pending

TC ID	Scenario	Test Steps	Expected Result	Actual Result	Pass/Fail
	access	existing Laptop Request record	create/edit records	only for it_manager); live edit-attempt test recommended as follow-up	
TC-007	Employee can create and view own request	Impersonate employee → submit and then reopen the request	Employee can create and view their own record	Confirmed via TC-001 submission and subsequent record lookup	Pass
TC-008	Approval flow is active	Open Flow Designer → check status of “Laptop Request Approval Flow”	Flow status shows Active	Flow confirmed Active after manual activation	Pass
TC-009	Update Set captures all customizations	Open “HR Onboarding Application” Update Set → review Customer Updates list	All artifacts (table, fields, ACLs, roles, business rule, flow, relationship) are present	52 customer updates confirmed, covering every expected artifact type	Pass

Bug Tracking

The following issues were identified and resolved during development and testing:

Bug ID	Bug Description	Steps to Reproduce	Severity	Status	Additional Feedback
BG-001	Approvals related list did not appear on the Laptop Request Form	Open a submitted request record and check the related lists at the bottom of the form	Medium	Closed	Fixed by recreating the Relationship record with the correct refineQuery script and re-attaching it under Configure → Related Lists
BG-002	New requests were not routing for approval	Submit a new Laptop Request and check whether an Approval record is created	High	Closed	Root cause was the Flow being in Draft/Inactive state; fixed by manually activating it in Flow Designer
BG-003	it_manager / it_employee roles not visible when configuring Groups	Try to add the roles to the IT Managers / IT Employees groups	Low	Closed	Roles exist inside the scoped application; fixed by switching Application Scope from Global to Project Application before searching

Sign-off

Tester Name: _____

Date: _____

Signature: _____

Notes

- Test cases cover both positive scenarios (successful submission and approval) and negative/edge scenarios (duplicate requests, unauthorized edits).
- TC-005 and TC-006 are marked Pending as they require a second live test cycle (a second submission in the same year, and a direct edit attempt as a manager) beyond what was covered in this session.
- Bug tracking captures configuration issues found and fixed during setup — all were resolved before final sign-off.
- Final sign-off from the project reviewer should be obtained once TC-005 and TC-006 are executed and marked Pass.
